DE-A-10221330 (D1), which is mentioned in the description, represents the closest prior art. D1 describes a printing press with at least one engraved cylinder, wherein an inking arrangement and a type forme changing device are displaceably and alternately placed against or removed from the engraved cylinder.

Independent claims 1, 3 and 10 differ therefrom in that:

- the inking arrangement and the type forme Claim 1: changing device are interconnected by a common drive such that they move reciprocally towards or away from the engraved cylinder.
- the inking arrangement and the type forme changing device are fixedly interconnected.
- Claim 10: a common control system is provided for the drives, wherein the control system controls the movement of the type forme changing device according to the movement of the displaceable part such that the control system causes the displaceable part and the type forme changing device to move in a mutually coordinated manner successively or simultaneously.

## • INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No. PCT/DE 03/03643

The common contribution of the independent claims over the prior art consists in coupling the movements of the inking arrangement and the type forme changing device.

The subject matter of claims 1, 3 and 10 is therefore novel.

Coordinating and coupling the movements of the inking arrangement and the type forms changing device has the effect of reducing printing press down time.

The available citations do not, either individually or in combination, suggest subject matter with the features of claims 1, 3 and 10 for the indicated purpose.

Therefore, claims 1, 3 and 10 involve an inventive step and, together with the advantageous developments shown in dependent claims 2, 4-9 and 11-25, meet the requirements of PCT Article 33(1) to (4).
